*Some quick usage examples:*

Do you crave that sludgy, chunky FuzzTortion sound? Set the GAIN control to 3 o'clock and adjust the Bias (SKIN/MEAT) control to noon, then dial in the VOL to taste. For increasingly more compressed and gated Fuzz tones, increase the BIAS control further towards the MEAT or give the FUZZLY BEAR 2 an even thicker coat of fur, by turning the GAIN further up, allowing the magic to happen when it is set fully clockwise.

On the other hand, if synth sputtery Fuzz is what you desire, the FUZZLY BEAR 2 also has you covered. When the GAIN is set to max and the Bias set fully to MEAT, it will rip your face off and you'll get almost a ghost octave, pseudo trumpety kinda vibe, perfect for the classic tunes of yesteryear. Decrease the Bias setting for more gnarly aggressiveness.

With its incredible range of tones, the FUZZLY BEAR 2 is also capable of old school Overdrive sounds. Set the Bias towards SKIN and dial in the GAIN around noon. If this is too much, instantly clean up the signal by rolling off the instrument volume.
